Education

Aptech Computer Education

Nov 2020 – Aug 2021

. Front End Software Development

Zuri Internship

Mar 2022 – Aug 2022

. Full Stack Software Development

Skills

Proficient In: Django, React.js, Python, Javascript, PostgreSQL, JQuery, Git/Github, Wordpress, Html5, CSS3, Bootstrap

Professional Experience

Software Developer Contractor

Aug 2022 till Date

Web Application Developer

- I currently work as a contractor who builds web applications for clients, I collaborate with UI/UX designers, DevOps engineers, and more experienced backend engineers to bring applications to live. I've worked with a number of clients from different aspects of business and my quality work, time management, and communication skills have kept them coming back and referring more clients.

Zuri Internship

Mar 2022 – Aug 2022

Full Stack Web Developer Intern

- I interned at Zuri (first cohort, 2022), I learnt new technologies in the backend development stack and also sharpened my front end development skills. The internship was designed to eliminate interns stage by stage. I made it to the final stage, at the final stage of the cohort, I was paired with a team and together, we built a live web application that software developers can visit to copy and download starter codes for authentication functionalities in various frameworks.

Rootbuoy Digital Services

Dec 2021 – Aug 2022

Software Developer

- I developed the client side of web applications projects contracted out to **Rootbuoy Digital**, I bring the user interfaces (UI), into their live versions. I also test the client side of web applications before deployment on a

live server. My presence in the I.T department at also increased the delivery rate and the quality of projects Rootbuoy Digitals delivered to its clients.

Projects

Meal-Tab

A web based application targeted to making life easier for the customers of a brand, the brand in question, sells and deliver meals to their clients. The brand owns a restaurant where their customers can visit to relax and have meals, they also have some reserved chefs that work at events, their job is to prepare the catering services that may be needed in any event. The Meal-tab web application, enables the users to order their favorite meals online, pay for the meals online and get them delivered to their preferred destination, the application also has a feature that enable users to book a table at Meal-tab restaurants. Additionally, it enables users to book chefs for an event they might be looking forward to host.

- Live at : meal-tab.herokuapp.com

Technogies Used

- Html5, Javascript, Bootstrap, Django, CSS3, JQuery, PostreSQL

Contributions

- Developed the full project

Auth_Wiki

A web based library that contains various authentication starter codes for developers, developers can visit the site to copy or download a library for the programming language or framework they are working with , the main objective of the project is save developers from the stress of writing authentication codes for signup functionalities, login, logout and the likes from scratch.

- Live at : auth-team7.herokuapp.com

Technogies Used

- Html5, Ajax, Javascript, Bootstrap, Django, CSS3, JQuery, Sqlite

Contributions

- Created the models rendered to the database used for the library app
- Created comment and reaction functionality that enables users to give feedbacks and reactions to each library
- Integrated the frontend design with the backend

Hobbies

- Video Games
- Web Surfing
